

Client Portal Overview

Transparency. Accountability. Reliability. See your IT and cybersecurity in action.

When you partner with a technology provider you should expect more visibility, not less. The Corsica Technologies portal gives you access to your organization's cybersecurity and technology in real-time. Get visibility into your device endpoint protection, employees' behavior, support tickets, and more.

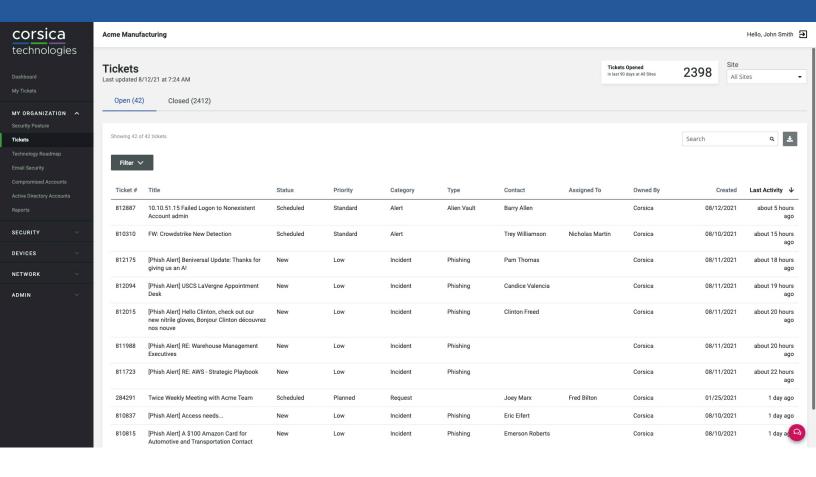

Main Dashboard

A snapshot of your organization's cybersecurity and IT health is available 24/7/365, right from your fingertips.

- Executive overview
- Gain insight into device patching and endpoint protection
- View email security information
- Quickly manage support tickets

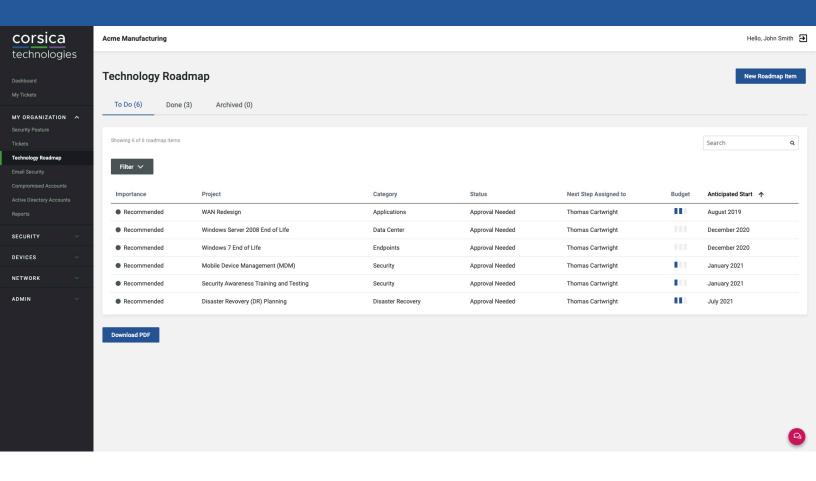

Organizational Ticket Overview

Easily access your organization's service tickets. Want to view the specifics of a particular ticket? Just click on a ticket to pull up all the details and communication history.

- Review open support tickets
- · Quickly check the communication history for a ticket
- Add notes and attachments to tickets

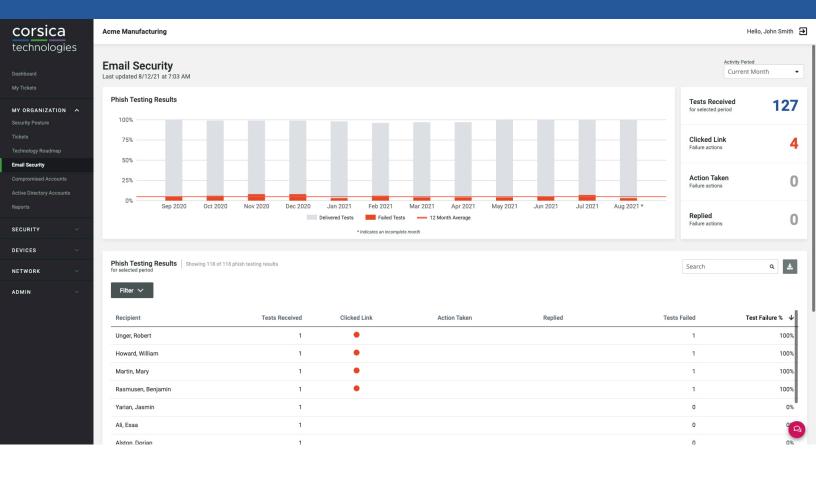

Technology Roadmap

Be better prepared with a list of important upcoming projects, including what to expect when it comes to budget.

- View recommended technology initiatives
- Plan for current and long-term projects
- Align budgets with goals
- Understand the timing of budget items
- Include your hardware, software, and all IT-related projects

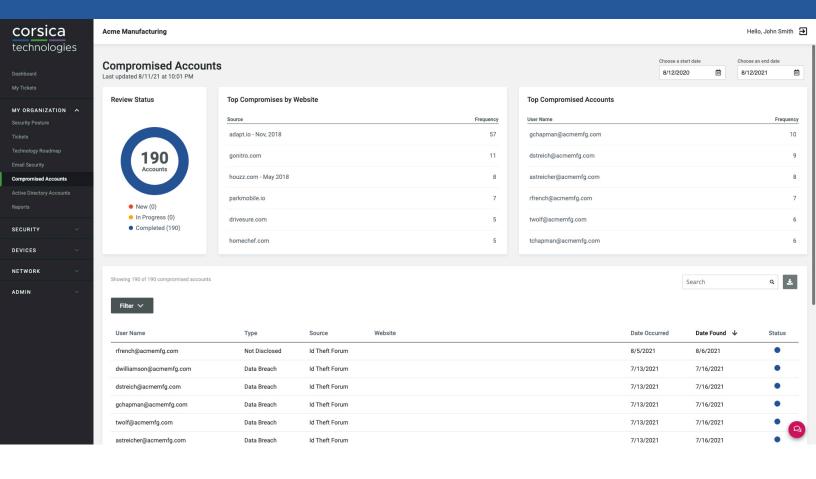

Email Security

Gain full transparency into how your employees fare against email phishing tests, identifying risky behavior before it's too late.

- Understand which employees repeatedly fail phishing tests
- See how aware your users are in today's threat landscape
- Gauge which employees need additional cybersecurity training
- View how many tests your employees have received

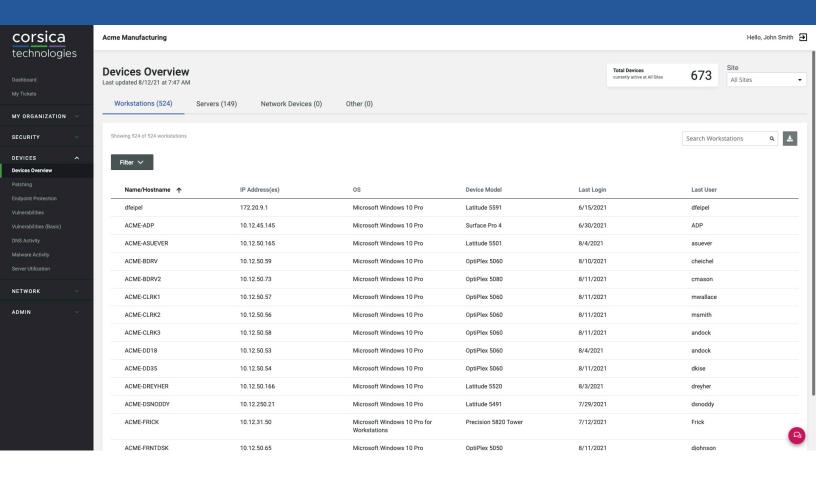

Compromised Account Report

Stay on top of where and when your employees' credentials are exposed online.

- Identify when and where threats are occurring
- View which accounts have been compromised
- Review resolution status

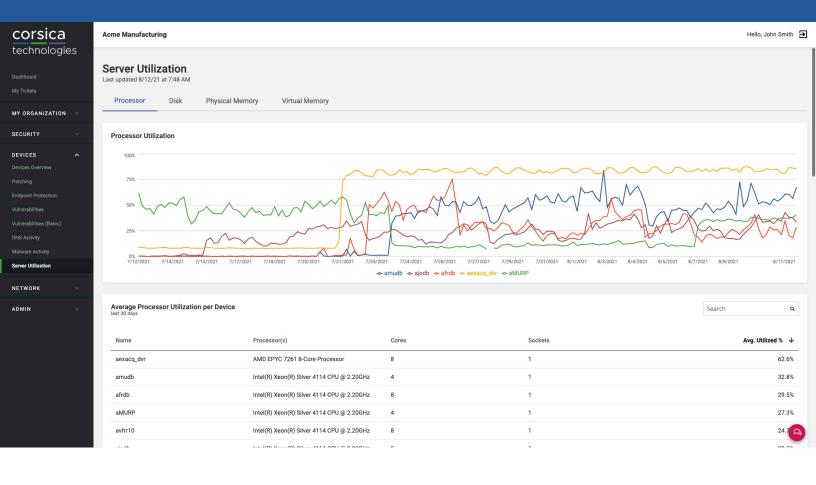

Devices Overview

View device details across your organization, including workstations, servers and network devices.

- Review device details, activity and health information
- View device inventory, warranty and lifecycle

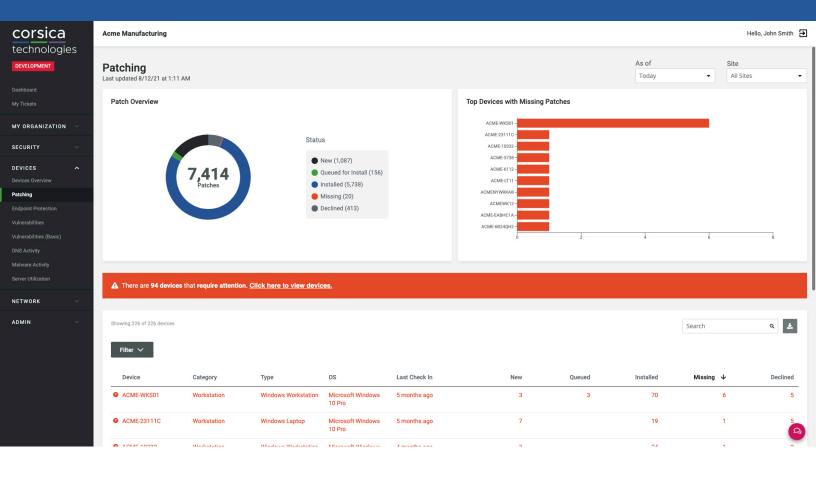

Server Utilization Report

View the performance of your servers all in one place.

- Gain insight into the workload and activity on your servers
- See processor, disk and memory utilization

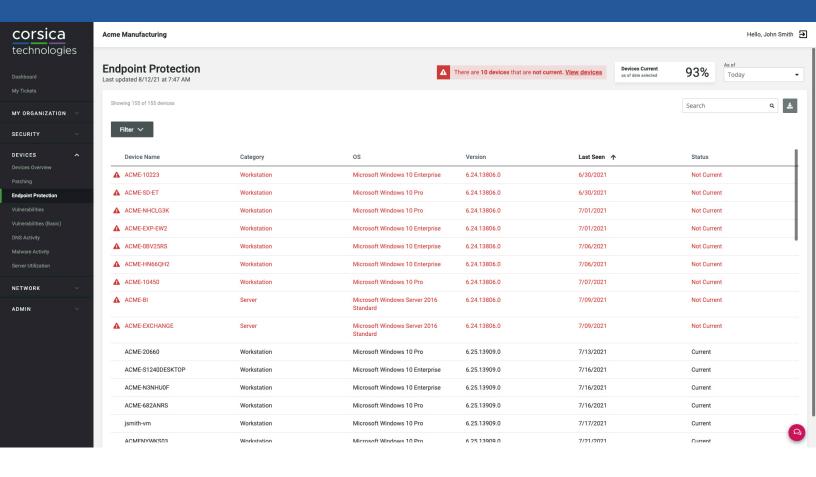

Device Patching

Review your organization's device patching and quickly identify devices needing remediation.

- View device patching status for each device
- Identify missing device patches that pose security risks
- View in-depth patch details with links to knowledge base articles
- View monthly snapshots

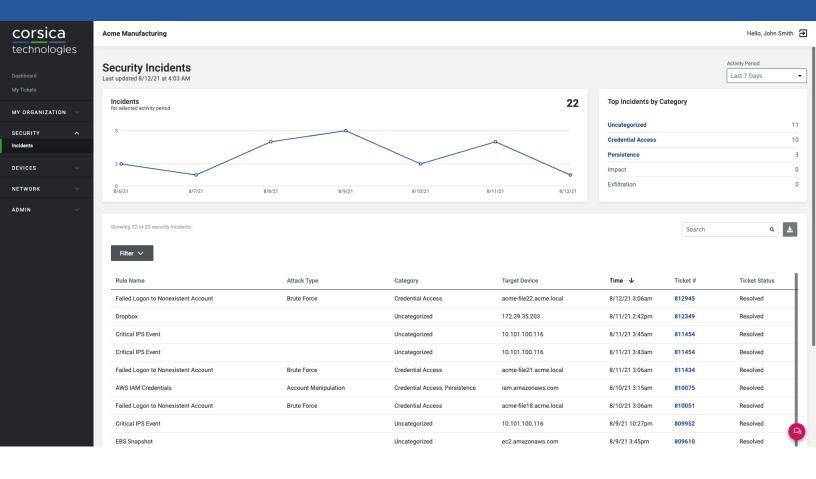

Endpoint Protection

Understand your company's device endpoint protection status and identify any devices that are out of date.

- View device endpoint protection statuses
- Quickly identify devices that need attention
- View monthly snapshots

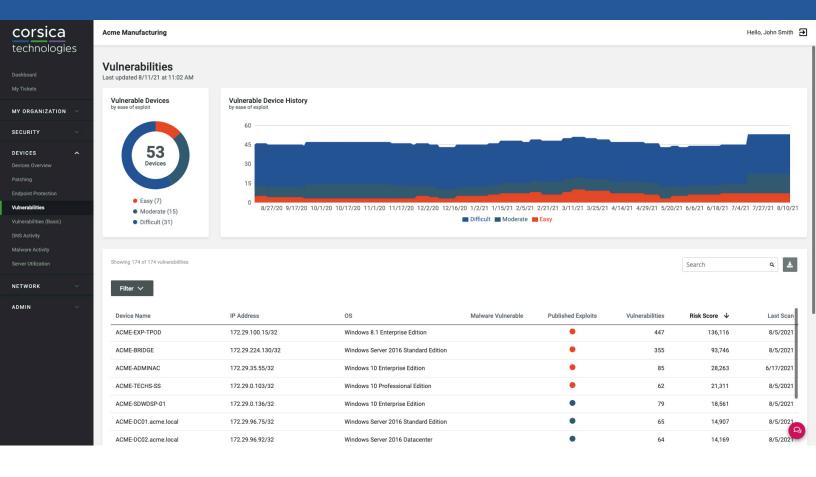

Security Incidents

View security incident activity in real-time as the Corsica Technologies team identifies and remediates threats against your network and devices.

- View security incident activity over time
- Gain visibility into resolution statuses and associated tickets
- View incidents by category and attack type

Device Vulnerabilities

Track device vulnerabilities and risk profile over time.

- View all devices with identified vulnerabilities, ranked by ease of exploit
- Get additional details on vulnerabilities and published exploits
- Track changes in risk profile over time
